

Sadece (tazycu) frekonstarı görterilen yukarıdaki süperheteradin alıcı, aleran işaret hangi fe frekonsuda alusa alısın, anu sabit bir fi ava frekonsuna taşın. Örneğin hangi fe frekonsuda alusa alısın, anu sabit bir fi ava frekonsuda için fi değerleri sırasıyla 455 kHz ve 10.7 MHz'dir. Böylece bu sabit ara frekons için tasarlaran demodiletir devreri (protilete demodiletir devreri yonunda kuvetlendiri i e süzgeç de bulun) malusumu verinde çalışır.

Eger girsse fe freheur younder fe+2fi freheussna schip borha bir isaret de gelisse,

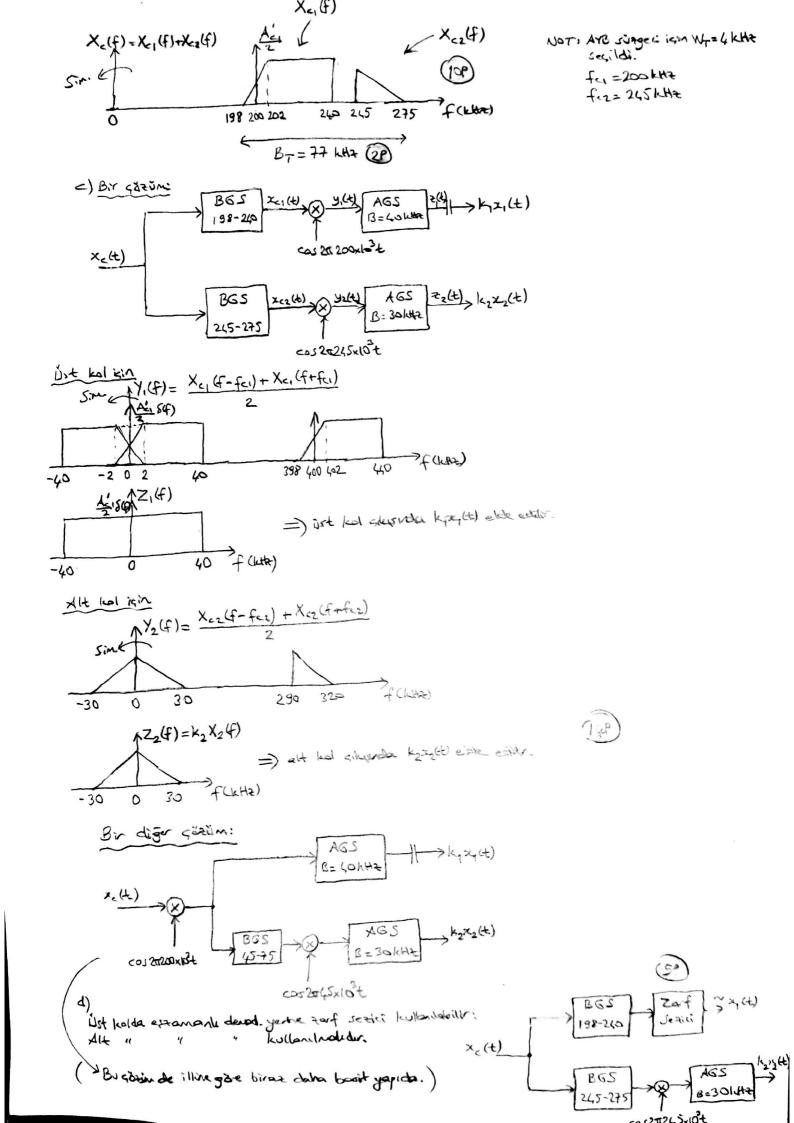

bu isaret de fi ara freheussna topsur fe+2fi "hayal freheus" clarak adlandurilir.

Hayal freheur problemi ile karsilassamah ich alm girpindebi BBS iyi tasarlassamahar.

c) 文(t) = x(t)*社 乳(t)=文(t)*社=x(t)*社+社 = x(t)*社+社 = F{2(t)}=X(f)F{元子(元子(元子)=-X(f)=-x(t)) -155(f)
